Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/808,683

Applicant(s)

WELLEN, JEROEN SIEBRAND

Examiner

David S. Kim

Art Unit

2613

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 October 2007 and 06 November 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application
- ☐ Other: _____

DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed on 06 November 2007 fails to comply with 37 CFR 1.97(c) because it lacks a statement as specified in 37 CFR 1.97(e). It has been placed in the application file, but the information referred to therein has not been considered.
2. The information disclosure statement filed on 06 November 2007 fails to comply with 37 CFR 1.97(c) because it lacks the fee set forth in 37 CFR 1.17(p). It has been placed in the application file, but the information referred to therein has not been considered.
3. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Claim Objections

4. **Claim 20** is objected to because of the following informalities:

In **claim 20**, "said active optical upstream link" is used where -- said active optical upstream path -- may be intended. Otherwise, antecedent basis is lacking.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. **Claims 1-5 and 16-20** are rejected under 35 U.S.C. 102(e) as being anticipated by Combs et al. (U.S. Patent No. 6,751,417 B1, hereinafter "Combs").

Regarding claim 1, Combs discloses:

In an access network, a method for the communication of services to and from customer premises (end-users 112 in Fig. 1), comprising:

transmitting (arrows pointing to the right in Figs. 3-4) services to said customer premises using an end-to-end passive optical downstream path (e.g., paths associated with optical splitters 316 in Fig. 3 and 304 in Fig. 4); and

receiving (arrows pointing to the left in Figs. 3-4) services from said customer premises using an active optical upstream path (e.g., upstream links in Figs. 3-4).

Regarding claim 2, Combs discloses:

The method of claim 1, wherein a central office (head-end 102 in Fig. 1) of said access network transmits services to said customer premises via said passive optical downstream path.

Regarding claim 3, Combs discloses:

The method of claim 1, wherein said passive optical downstream path comprises a means for splitting optical signals (optical splitters 316 in Fig. 3 and 304 in Fig. 4).

Regarding claim 4, Combs discloses:

The method of claim 3, wherein said means for splitting optical signals comprises an optical power splitter (optical splitters 316 in Fig. 3 and 304 in Fig. 4).

Regarding claim 5, Combs discloses:

The method of claim 1, wherein a central office of said access network receives services from said customer premises via said active optical upstream path (notice that head-end 102 receives transmissions via upstream paths in Figs. 3-4).

Regarding claim 16, Combs discloses:

An apparatus for the communication of services to and from customer premises in an access network, comprising:

a means for splitting downstream services being transmitted through an end-to-end passive optical path (e.g., paths associated with optical splitters 316 in Fig. 3 and 304 in Fig. 4) intended for said customer premises (optical splitters 316 in Fig. 3 and 304 in Fig. 4);

at least one means for receiving services comprising optical signals from said customer premises intended for upstream transmission (e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4); and

at least one means for aggregating and multiplexing upstream traffic (e.g., 318 in Fig. 3, 310 and 308 in Fig. 4).

Regarding claim 17, Combs discloses:

The apparatus of claim 16, further comprising:

at least one means for transmitting the aggregated services upstream (e.g., lightwave transmitters in 314 in Fig. 3, lightwave transmitters in Fig. 4).

Regarding claim 18, Combs discloses:

A passive/active access network for the communication of services to and from customer premises, comprising:

a central office (head-end 102 in Fig. 1);

at least one customer premise (end-users 112 in Fig. 1); and

an active/passive access unit (Figs. 3-4) for providing communication between said central office and said at least one customer premise, wherein services from said central office intended for said at least one customer premise are communicated to said at least one customer premise using an end-to-end passive optical downstream path (e.g., paths associated with optical splitters 316 in Fig. 3 and 304 in Fig. 4) of said active/passive access unit and services from said at least one customer premise intended for said central office are communicated to said central office using an active optical upstream path (e.g., upstream paths in Figs. 3-4).

Regarding claim 19, Combs discloses:

The passive/active access network of claim 18, wherein said passive optical downstream path of said active/passive access unit comprises a means for splitting (optical splitters 316 in Fig. 3 and 304 in Fig. 4) services from said central office.

Regarding claim 20, Combs discloses:

The passive/active access network of claim 18, wherein said active optical upstream link of said active/passive access unit comprises:

at least one means for receiving (e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4) services from said at least one customer premise intended for said central office;

at least one means for aggregating and multiplexing upstream traffic (e.g., 318 in Fig. 3, 310 and 308 in Fig. 4); and

at least one means for transmitting (e.g., lightwave transmitters in 314 in Fig. 3, lightwave transmitters in Fig. 4) the aggregated services upstream to said central office.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. **Claims 6-15** are rejected under 35 U.S.C. 103(a) as being unpatentable over Combs.

Regarding claim 6, Combs discloses:

The method of claim 1, wherein said active optical upstream path comprises:

at least one receiver for receiving services from said customer premises intended for upstream transmission (e.g., transceivers in 312 in Fig. 4).

Combs does not expressly disclose:

at least one switch for aggregating and multiplexing upstream traffic.

However, such switches are extremely well known in the art. Notice that Combs discloses the use of time-division multiplexing (TDM) for aggregating and multiplexing upstream traffic (col. 8, l. 5-8). At the time the invention was made, it would have been obvious to one of ordinary skill in the art to implement this TDM with at least one switch. One of ordinary skill in the art would have been motivated to do this since TDM is conventionally performed with a switch.

Regarding claim 7, Combs discloses:

The method of claim 6, wherein said active optical upstream path further comprises:
at least one transmitter for transmitting the aggregated services upstream (digital lightwave transmitter in 302 in Fig. 4).

Regarding claim 8, claim 8 is an apparatus claim that corresponds largely to the method claim 6. Therefore, the recited steps in method claim 6 read on the corresponding means in apparatus claim 8. Claim 8 also includes limitations absent from claim 6. Combs also discloses these limitations:

a splitter associated with an end-to-end passive optical path for splitting downstream services intended for said customer premises (optical splitter 304 in Fig. 4);

at least one receiver for receiving services comprising optical signals from said customer premises intended for upstream transmission (e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4).

Regarding claim 9, Combs discloses:

The apparatus of claim 8, further comprising:
at least one transmitter for transmitting the aggregated services upstream (digital lightwave transmitter in 302 in Fig. 4).

Regarding claim 10, Combs discloses:

The apparatus of claim 8, wherein said splitter defines a passive optical path of said apparatus (optical splitters are conventionally passive).

Regarding claim 11, Combs does not expressly disclose:

The apparatus of claim 10, wherein said passive optical path further comprises a repeater.

However, repeaters are extremely well known in the art. At the time the invention was made, it would have been obvious to one of ordinary skill in the art to arrange said passive optical path of Combs to further comprise a repeater. One of ordinary skill in the art would have been motivated to do this since repeaters are generally used to boost signal power along a transmission path so that transmission signals can travel farther.

Regarding claim 12, Combs discloses:

The apparatus of claim 8, wherein said at least one receiver and said at least one switch define an active optical path of said apparatus (the transceivers in 312 in Fig. 4 and the TDM switch not expressly shown in Fig. 4 are active components).

Regarding claim 13, Combs discloses:

The apparatus of claim 12, wherein said active optical path further comprises a transmitter (the digital lightwave transmitter in 302 in Fig. 4 is an active component).

Regarding claim 14, Combs discloses:

The apparatus of claim 8, wherein said splitter comprises a power splitter (optical splitter generally operate to split power).

Regarding claim 15, Combs discloses:

The apparatus of claim 8, wherein said apparatus is located within a central office of an access network configured for point-to-point communication (e.g., communication between the point of head-end 102 and the point of an end-user 112 in Fig. 1).

Response to Arguments

9. Applicant's arguments filed on 26 October 2007 have been fully considered but they are not persuasive. Applicant presents four salient points.

Regarding the first point, Applicant states:

"Claims 1-5 and 16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Combs. The rejection is traversed. Combs does not teach each and every element recited in independent claims 1, 16, and 18. The invention claims 'transmitting services to said customer premises using an end-to-end **passive** downstream path' (through passive splitter/combiner 140) and 'receiving services from said customer premises using an **active** optical upstream path' (through active switch 122). Combs, to the contrary, *only* teaches a single path active network, where all traffic between Head-End 102 and End-Users 112 must pass through active components Mux-Node 104, and Mini-Fiber Node 108" (Remarks, p. 7, middle paragraph, emphasis Applicant's).

“Combs does not teach the ‘passive’ optical path’ of independent claim 8, because as stated above, Combs *only* teaches a single path active network, where all traffic between Head-End 102 and End-Users 112 must pass through active components Mux-Node 104, and Mini-Fiber Node 108. Therefore, in addition to Combs not even teaching a ‘passive optical path,’ nothing in Combs would suggest utilizing one either” (Remarks, p. 8, emphasis Applicant’s).

Examiner respectfully notes that Mux-Node 104 contains active and passive optical components. The downstream signals pass through passive optical components, i.e., optical splitters 316 in Fig. 3 and 304 in Fig. 4. Thus, transmitting services to the customer premises of Combs through the downstream passive optical components of Mux-Node 104 constitutes “transmitting services to said customer premises using an end-to-end passive optical downstream path”. The upstream signals pass through active optical components, e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4, lightwave transmitters in 314 in Fig. 3, lightwave transmitters in Fig. 4. Thus, receiving services from the customer premises of Combs through the upstream active optical components of Mux-Node 104 constitutes “receiving services from said customer services using an active optical upstream path”. Accordingly, this point is not persuasive.

Regarding the second point, Applicant states:

“A further difference between architectures, is that the claimed invention provides direct connections between splitter/combiner 140 (in the passive downstream path) and switch 122 (in the active upstream path) to customer premises 130_{1-N}, but Combs contrarily teaches connection to the end users 112; by way of taps 110 into Mini-Fiber nodes 108” (Remarks, p. 7, middle paragraph).

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., *direct connections between splitter/combiner 140 (in the passive downstream path) and switch 122 (in the active upstream path) to customer premises 130_{1-N}*) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Accordingly, this point is not persuasive. If Applicant believes that these features patentably distinguish Applicant's invention from the prior art of record, then Applicant is encouraged to include claim language that expressly includes these features.

Regarding the third point, Applicant states:

“Hence, Combs [does not teach] the two distinct network paths (active and passive) of the claimed invention” (Remarks, p. 7, middle paragraph).

Examiner respectfully notes that the path traversed by the downstream signals constitutes one distinct (passive) path and that the path traversed by the upstream signals constitutes another distinct (active) path, from a number of various perspectives.

For example, in the perspective of logical paths, the logical path traversed by the downstream signals constitutes one distinct logical path, and the logical path traversed by the upstream signals constitutes another distinct logical path. The downstream signals pass through passive optical components, i.e., optical splitters 316 in Fig. 3 and 304 in Fig. 4. The upstream signals pass through active optical components, e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4, lightwave transmitters in 314 in Fig. 3, lightwave transmitters in Fig. 4. Accordingly, in the perspective of logical paths, this point is not persuasive.

As another example, in the perspective of physical medium paths, the physical medium path traversed by the downstream signals through the distinct downstream passive optical components (i.e., optical splitters 316 in Fig. 3 and 304 in Fig. 4) constitutes one distinct physical medium path, and the physical medium path traversed by the upstream signals through the distinct upstream active optical components (e.g., lightwave receivers in 320 in Fig. 3, transceivers in 312 in Fig. 4, lightwave transmitters in 314 in Fig. 3, lightwave transmitters in Fig. 4) constitutes another distinct physical medium path. Accordingly, in the perspective of physical medium paths, this point is not persuasive.

As yet another example, in the perspective of physical wavelength paths, Combs teaches the use of WDM to transmit and receive upstream and downstream signals using one or more optical fibers (col. 8, l. 8-12). The scope of this teaching includes the use of at least one distinct physical wavelength path for the upstream signals that pass through the active optical components and the use of at least one distinct physical wavelength path for the downstream signals that pass through the passive optical components. Accordingly, in the perspective of physical wavelength paths, this point is not persuasive.

Regarding the fourth point, Applicant states:

“Hence, Combs [does not teach that] the components in Combs [are] even arranged in a similar fashion to those in the invention” (Remarks, p. 7, middle paragraph).

Examiner respectfully notes that Applicant's previous arguments and amendments have not sufficiently distinguished Applicant's invention from the prior art of record. Until Applicant provides arguments and/or amendments that do sufficiently distinguish Applicant's invention from the prior art of record, Examiner respectfully maintains that the components in Combs are arranged in a similar fashion to those in the ***claimed*** invention. Accordingly, this point is not persuasive.

Summarily, Applicant's arguments are not persuasive. Accordingly, Examiner respectfully maintains the standing rejections.

Conclusion

10. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David S. Kim whose telephone number is 571-272-3033. The examiner can normally be reached on Mon.-Fri. 9 AM to 5 PM (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth N. Vanderpuye can be reached on 571-272-3078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
